RESEARCH AGENDA

I study how electricity-market institutions, transmission infrastructure, and environmental policy shape market efficiency, generation behaviors, renewable integration, and emissions.

JOB MARKET PAPER

Market Dispatch and Emissions in U.S. Electricity Markets: Spatial Reallocation and Operational Efficiency

Joint with Chris Malloy and Qihong Liu.

Studies how wholesale electricity-market restructuring reshaped generation dispatch and emissions across U.S. electricity markets, quantifying tradeoffs between operational efficiency, regional generation shifts, and environmental damages.

WORKING PAPERS

Transmission Infrastructure and Fuel Price Pass-Through in Electricity Markets: Evidence from Texas CREZ

Under preparation. Solo-authored. Draft available upon request.

Examines whether transmission expansion changes the pass-through of fuel-price shocks into electricity generation and emissions.

How Does In-State Renewable Electricity Capacity Affect CO₂ Emissions? The Role of Renewable Portfolio Standards

Under preparation. Solo-authored.
